

COIN BLANK FINISHING SYSTEMS ... for collector and circulation coin blanks

In coin finishing technologies, Rösler is known as one of the global market leaders. Our technical know-how has formed the basis for ground-breaking developments in process and mechanical engineering, be it the cleaning of regular issue coin blanks before and after the annealing process or the cleaning and polishing treatments while producing plating coins.

The Rösler fully automatic centrifugal disc finishing unit, MPA 37.1 A/2, made of stainless steel has a processing capacity of up to 1500 kg [3308 lb] / hour - the highest in the market and the most popular. We also offer special machines for the cleaning and polishing of collector coin blanks and commemorative coins made of precious metals, such as silver, gold and other materials of high quality.

Finishing line for commemorative/collector coin blanks

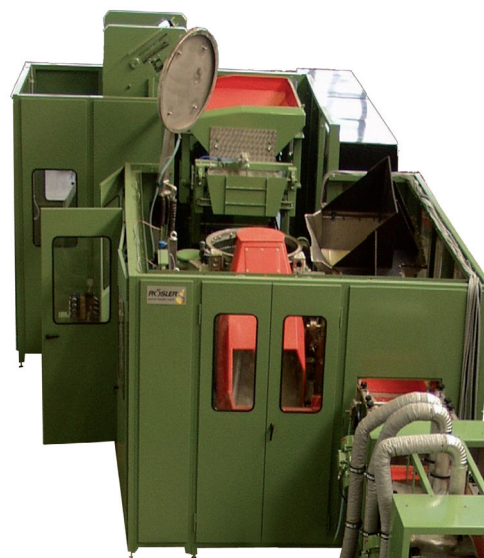

Compact machine system
MPA 07/1 E-A

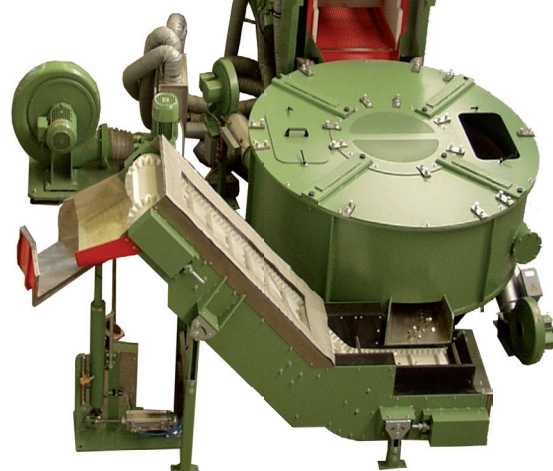

Stain- and dustfree warm
textile drying

Finishing line for circulation coin blanks

Polishing media
and compounds
